

## RIMBERIO COIN — WHITEPAPER

### TABLE OF CONTENTS

1. Executive Summary
2. Introduction & Problem Statement
3. Vision & Mission
4. Market Opportunity
5. Why Rimberio? (Value Proposition)
6. Roadmap (Q1–Q8)
7. Tokenomics
8. Utility & Use-Cases
9. Governance Model
10. Roadmap — 8-Quarter Execution Compliance & Legal Note
11. Listing & Liquidity Plan
12. Security & Audits
13. Compliance & Legal Note
14. Our contacts & Socials

### 2. INTRODUCTION & PROBLEM STATEMENT

Traditional meme coins grow on hype and die on silence. Their lifecycle depends on spontaneous attention without engineered retention. Once narrative cools, liquidity fractures, communities disband, and tokens decay to illiquid relics.

The core problem is **meme coins have no incentive architecture to keep communities coordinated once the hype era ends**. They lack:

- **Retention mechanics** — no reason to hold beyond price hope
- **Structured value accrual** — attention never settles into a treasury or utility loop
- **Governance with teeth** — holders cannot shape outcomes, only observe
- **Credible roadmap discipline** — nothing obligates delivery or irreversible

milestones • **Community-aligned distribution** — early insiders dominate upside, late entrants subsidize exits

As a result, meme coins become disposable cycles instead of compounding public goods.

Rimberio is introduced as a memetic asset with *designed persistence*: incentives, rules, and irreversible checkpoints that convert temporary hype into stable coordination capital.

---

### 3. VISION & MISSION

**Vision** — To turn memetic attention into a governed economic primitive that compounds instead of evaporates.

**Mission** — Build a community-owned meme economy with irreversible checkpoints, incentive-aligned distribution, and programmable value accrual that survives beyond the initial hype window.

---

### 4. MARKET OPPORTUNITY

Memes already move markets — but without capture. Billions in aggregate volume flows through narrative-driven tokens with no treasury capture, no structured holder alignment, and no long-term coordination engine. This creates a massive unexploited gap:

• **Narrative is capital but currently leaks** to exchanges and traders • **Communities have no mechanism to own the upside they create** • **Speculation monetizes attention without compounding it**

Global meme-asset capital is now large enough to demand *design*, not accident. Rimberio positions itself as a structured alternative: a memetic asset that installs capture and persistence primitives into a domain already proven to attract liquidity, attention, and velocity.

---

### 5. WHY RIMBERIO? (VALUE PROPOSITION)

Most meme coins rely on luck and momentum. Rimberio relies on **designed persistence** — rules that force attention into coordinated value and not evaporative hype.

**Rimberio creates value by:** • Turning *community activity* into *asset accrual* instead of empty engagement • Locking cultural momentum into *treasury-anchored flywheels* • Replacing “hope to hold” with *structured incentives to hold* • Giving holders *agency* through governed checkpoints, not blind faith • Eliminating insider-bias through *no VC pre-mine & mission-based entry*

Rimberio is not trying to be the most technical coin — it is engineered to be the most **survivable meme economy** in a field where 99% die on silence.

---

---

## 6) ROADMAP (Q4 2025)

- Galxe airdrop live
- CEX listing target
- 10k holders milestone

## 7) TOKENOMICS

**Total Supply:** 9,000,000,000 RIMB

|15% Reserved Token held in a multi-signature wallet for exchange Listing, Bridges, and Liquidity Needs |

## 8) UTILITY & USE-CASES

### 1) Community Governance

Holders may vote on proposals, roadmap changes, treasury allocation, and ecosystem decisions.

### 2) Reward Layer for Campaigns

Used to reward participation in airdrops, quests, ambassador tasks, and on-chain activity.

### 3) Liquidity Incentives & Staking (Planned)

Staking pools to provide periodic yields and add depth to trading pairs.

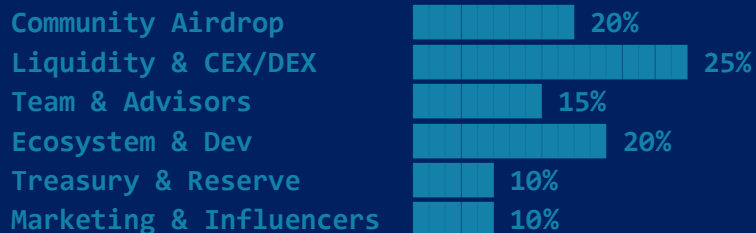

### 4) Payment & Tipping in Community

Micro-payments within Rimberio community channels, social tipping, and partner integrations.

### 5) Access Token for Ecosystem

Required to access premium tools, whitelists, partner mints, and closed alpha groups.

## TOKEN DISTRIBUTION

## 9) GOVERNANCE MODEL

Rimberio governance is phased — holders gain increasing control as irreversible checkpoints are reached.

**Phase-0 (Pre-Launch / Airdrop)** • No on-chain governance • Parameters fixed by deploy spec

**Phase-1 (Post-Distribution — Soft Governance)** • Snapshot voting for signaling • Community-ratified proposals (non-binding) • Advisory council publishes execution memos

**Phase-2 (On-chain Governance — Binding)** • Treasury spend only by quorum vote • Parameter changes gated by timelock • Proposal submission requires stake / threshold • All votes publicly auditable

**Principles** • No plutocracy — participation weighting not pure balance size • No informal back-channel governance — decisions live and logged • No surprise changes — timelocks & grace windows mandatory

## 10) ROADMAP — 8-QUARTER EXECUTION

**Q4 2025— Launch & Capture** • Contract deploy & fair-bias mission airdrop • Website v1 + explorer + brand primitives • Galxe / Zealy / Crew3 quest funnels • First partner co-drop negotiation window

**Q1 2026— Liquidity & Retention Layer** • CEX/DEX dual-listing attempt • Liquidity incentive pools (time-bound) • Soft governance (Snapshot) online • Ambassador & content flywheel live

**Q1 2026 — Utility Unlock-1** • Vault / staking (non-custodial) • Social tipping & partner micro-payments • First marketplace / partner integration • Quarterly state-of-treasury publication

**Q2 2026— Governance Hardening** • On-chain binding votes + timelocks • Milestone-gated ecosystem grants • Burn-logic events tied to governance acts • Second exchange expansion attempt

**Q2 2026— Ecosystem Lift-Off** • Builder micro-grants cohort-1 • Partner airdrops gated by RIM • Premium access modules (WL / tools) • KPI-based liquidity re-weights

**Q3 2026— Treasury Productivity** • Governance-approved deployments • Yield routing & fee-sharing hooks • Multi-sig rotation to elected stewards • Bi-annual audit / proof of solvency

**Q3 2026— Expansion & Moats** • Cross-chain bridge / mirrors (if passed) • Cultural IP partnerships / memes-as-service • Play layer / quests v2 • Rinberio brand export to external venues

**Q4 2026— Maturity & Sustain** • Full community-driven cadence • Evergreen emissions sunset plan • Terminal burn schedule ratification • “No-founder-dependency” readiness test

## 11) LISTING & LIQUIDITY PLAN

Rimberio treats liquidity as infrastructure — not marketing. Liquidity commitments precede hype cycles.

**DEX First — Controlled Depth** • Initial pool seeded on-chain with time-locked LP • No stealth unlocks / no surprise LP pulls • Depth sized to reduce slippage, not chase charts

**CEX Later — Only After Proof of Retention** • CEX outreach begins post Q2 metrics (holders > activity) • Priority to compliance-aligned mid-tier venues • No paid wash-volume agreements

**Liquidity Rules** • LP never deployed from team allocation • Any treasury-funded liquidity actions gated by vote • Unwinding / migration requires governance quorum

**Price-Protection Ethic** Rimberio does not engineer price — it engineers *conditions that make price discovery sane*: locked liquidity, vesting, no discretionary unlocks, governance-gated changes.

## 12) SECURITY & AUDITS

Rimberio assumes *security as a pre-condition*, not a post-launch patch. Controls are layered at contract, process, and governance strata.

**Code Discipline** • Immutable core — no upgradeable proxy for base token • Public repository with deterministic build • No owner-only mint or arbitrary pause hooks

**Audit Path** • Internal peer-review before deploy • Community static analysis bounty (Q1–Q2) • Third-party audit scheduling post-TGE (not pre-mock)

**Key Management** • Multi-sig for any treasury-touching action • No EOA keys with unilateral authority • Rotation schedule & on-chain disclosure of signers

**Exploit Posture** • Canonical halt only via governance-bound switch (not discretionary) • Incident runbook made public before mainnet • No opaque “security council” interventions

### 13) COMPLIANCE & LEGAL NOTE

Rimberio Coin is a community-driven digital asset and **not** a security, equity, debt instrument, or claim on future profit. The asset confers no contractual rights to dividends, revenue share, guarantees, or ownership in any legal entity.

**Nature of Asset** • Purely digital, permissionless, non-custodial • Utility and governance functions are protocol-bound • No promises of price appreciation or financial return

**Jurisdictional Posture** • Open participation — subject to local laws of the participant • Rimberio does not solicit in restricted jurisdictions • Users are responsible for self-compliance in their regions

**No Reliance on Promoters** The protocol is designed to function without dependence on a core team. Governance transitions progressively to holders as defined in the roadmap.

**Regulatory Standing** This document is informational and not an offering memorandum. No token sale, fundraising, or investment solicitation is conducted under this paper.

-----|----:|----| | Community Airdrop | 20% | Growth & distribution | | Liquidity & CEX/DEX | 25% | Listing & market depth | | Team & Advisors | 15% | 1–2 year vesting | | Ecosystem & Development | 20% | Product & partnerships | | Treasury & Reserve | 10% | Future use / safety | | Marketing & Influencers | 10% | Awareness & branding |

#### **Vesting Policy (High Level)**

- Team tokens: 6-month cliff + linear vesting up to 24 months
- Advisors: 3-month cliff + 12-month vesting
- Airdrop: Fully claimable as per event rules
- Liquidity: Unlocked for exchange usage
